Email: shabeebkpofcl@gmail.com
GitHub: github.com/shabikp

KEYSKILLS

- Clinical domain
- Programming
- Basic simulation & Engineering
- Machine Learning

PROFESSIONAL SUMMARY:

Dual-trained Physician and MMST candidate at IIT Kharagpur specializing in the integration of clinical medicine with engineering and data analytics. Leveraging a background in patient care (MBBS) and hands-on technical training in Python, Machine Learning, and Medical Imaging. Seeking a 3-month summer internship (May–July 2026) in Healthcare R&D, Medical Device Innovation, or Clinical Data Science.

CLINICAL EXPERIENCE

Intern Doctor | Government medical college, Thrissur, Kerala, India
July 2023–August 2024

Medical Officer | BC Roy Technology Hospital, IIT Kharagpur
July 2025- Present

EDUCATION:

MBBS | Government medical college, Thrissur, India
August 2018–May 2023

Indian Institute of Technology (IIT), Kharagpur | Master of Medical Science and Technology (MMST) | 2025 – 2028

- Focus: Intersection of Medicine and Technology.
- Coursework: ML in Bio-Systems, Programming in Python, Quantitative Techniques in Medicine, Biostatistics, Medical Imaging & Informatics, Computer assisted design in ABAQUS

PROFESSIONAL REGISTRATION

Travancore-Cochin Medical Council (TCMC) – Reg. No: 101353

SELECTED PROJECTS: github.com/shabikp/medical-AI-data-science-

Breast Cancer Survival Prediction | Python, Scikit-Learn

Developed a Decision Tree Classifier to predict patient survival outcomes using a clinical dataset of 4,000+ records.

Implemented One-Hot Encoding for categorical features and optimized model complexity via max_depth tuning to achieve high predictive accuracy.

10-Year Cardiovascular Risk Assessment | Python, Pandas

Built Logistic Regression model to classify risk of Coronary Heart Disease (CHD) based on patient biomarkers. Managed data preprocessing, including missing value imputation and feature scaling, evaluating the model using Confusion Matrices and Classification Reports.

Histopathology Image Classification | TensorFlow/Keras, CNN

Designed a Convolutional Neural Network (CNN) for binary classification of medical histopathology images into benign and malignant categories.

Custom Neural Network Implementation | Python, NumPy

Architected a multi-layer Backpropagation Neural Network from scratch using only NumPy, manually implementing weight optimization and gradient descent.

Health Insurance Risk & Cost Modeling | Python, Scikit-Learn

Engineered a predictive regression pipeline to estimate medical insurance charges based on demographic and lifestyle factors like BMI, age, and smoking status.
